

BOTOX IN THE DENTIST CHAIR - COSMETIC DENTISTRY AND THE FOUNTAIN OF YOUTH

There are many dental conditions that are approved to use BOTOX® injections for treatment such as:

- TMJ (temporomandibular joint)
- Bruxism (grinding teeth)
- Orthodontic retraining (relaxing muscles)
- Gummy smile (overcontracted smile)

An increasing number of trained cosmetic dentists are adding the purely cosmetic BOTOX procedure to their offering in 2011.

BOTOX treatments last from three to six months, and must be repeated to maintain the effects.
