

## TECHNOLOGY TRENDS - MAKING COSMETIC DENTAL VISITS FASTER & EASIER

New technologies are cutting down patient office time at least 50 percent, increasing patient safety, and making the whole dental process easier and more comfortable.

**iPads and iPhones:** cosmetic dentists are citing a wide range of uses from charting, displaying x-rays, and managing dental records to improving diagnoses and educating their patients.

**Digital X-Rays:** cosmetic dentists get a clearer picture of problems,

such as an abscess or decay that has formed, in a much shorter time than with the older version of x-rays.

**Computer-Aided Dentistry (CAD-CAM)** is revolutionizing tooth restorations, replacing goop-filled trays with 3D scans that mean no mess and no second appointments. Milling machines then use this 3D data to create perfect ceramic crowns while you wait.
